Claude Code برومبت حاضرين الشامل لـ

Oct 19, 2026 · @Yosre

برومبت واحد يبني مشروع حاضرين كامل: الجانب البرمجي، وست دعوات ثلاثية الأبعاد برسومات مختلفة، وموقع يعرضها بالثلاثي الأبعاد.

طريقة الاستخدام

راح Claude Code. البرومبت بالإنجليزي لأنه أدق بالبرمجة، وكل النصوص اللي يشوفها الضيوف بالعربي يكتب خطة أول، وينتظر موافقتك، وبعدين يشتغل خمس مراحل ويراجع شغله بصور بعد كل مرحلة.

1. سوّي مجلد جديد للمشروع، وحط بيه مجلد `reference/` بيه ملف `x-emerald3d.html` (دعوة كمرجع تقني بس. ملفات التصاميم القديمة ما تحتاجها (الزمرّد.
2. افتح Claude Code بهذا المجلد والصق البرومبت الشامل كامل.
3. راجع ملف `PLAN.md` ١ اللي يكتبه، ورد عليه بـ «موافق، ابدي بالمرحلة».
4. بعد كل مرحلة شوف الصور بمجلد `screenshots/` واستخدم برومبتات المتابعة بآخر المستند.
5. تحتاج حساب Vercel للنشر وقاعدة بيانات Postgres (Neon مجانية للبداية)، وملفات موسيقى مرخّصة لما تكون جاهزة.

المشروع كبير، فتوقّع ياخذ أكثر من جلسة. إذا وقف بنص مرحلة، قلّه «كمّل من وين وقفت حسب PLAN.md».

البرومبت الشامل

انسخه كامل والصقه بأول رسالة لـ Claude Code.

```
You are the lead creative engineer and art director for "Hadreen" (حاضرين),
an Iraqi brand of premium interactive digital wedding invitations. Build the
whole product in this repo: the backend, a shared invitation engine, SIX
advanced 3D invitation templates, and a marketing website whose hero and
gallery preview the templates in 3D.
Quality bar: award-level (Awwwards / FWA) art direction, motion and polish,
running smoothly on mid-range Android phones and iPhones, Arabic-first. Every
scene must feel like a film shot: deliberate composition, a light story,
depth, color grading, sound.

## Inspiration source
Study Webgency's template catalogue at https://webgencyinvitations.com (The
Sacred Garden, Blossom & Oud, Dolce Vita, Vibrant Vows, Destination Love,
Eternal Romance, Royal Gold, Minimalist, and their Instagram
@webgency_invitations reels). Learn their themes, moods, palettes and
interaction patterns: wax-seal envelopes that open, stage curtains,
```

chandeliers, scratch-to-reveal dates, arches and lanterns, swans, falling petals, a programme timeline, RSVP.
Our six templates are inspired by those themes but rebuilt as ORIGINAL 3D art with original Arabic copy and an Iraqi feel. Do not copy their images, illustrations, layouts or text. Exception: if /reference/webgency/ contains files Webgency has licensed to us, use them as provided.
Our old template designs are NOT part of this project. /reference/x-emerald3d.html is only a technical baseline (lighting, gobo shadows, opening timeline, fallbacks, audio), not a template to ship.

Ground rules (never break these)
- Brand: emerald #0B3D2E, gold #C9A96E, ivory #F8F3E8; each template adds its own palette. Fonts: Aref Ruqaa (display), Amiri (serif), Tajawal (UI); English weddings: Cormorant Garamond, Pinyon Script, Jost.
- Arabic RTL first (<html lang="ar" dir="rtl">); English supported per wedding. Arabic UI uses Eastern Arabic numerals.
- Dates: weekday, day, MONTH NUMBER plus the GREGORIAN month name, e.g. "الخميس ١٠ / ١٢ (ديسمبر) ٢٠٢٦". Never Syriac month names (كانون، شباط...). Store UTC, display Asia/Baghdad.
- Price: one plan, 49,000 IQD (٤٩ ألف دينار). Contact ONLY via Instagram DM @7adre.n (https://www.instagram.com/7adre.n/). Never show a phone or WhatsApp number anywhere.
- Never invent statistics, ratings, reviews, client counts or "first in Iraq" claims. Demo names, dates and venues are clearly labelled as examples.
- Art is procedural geometry, shaders and canvas textures, or CC0 assets listed in LICENSES.md with their sources.
- Content is always readable in the DOM; 3D is the stage, never the only carrier of information.

How to work
1. First study the inspiration site and /reference, then write PLAN.md: architecture, folder tree, data model, the six scene breakdowns (which Webgency theme inspired each, shots, timelines, assets, budgets), performance budget, risks. Stop and wait for my approval.
2. Then work phase by phase. After EVERY phase: run lint, typecheck and tests; start the app; capture Playwright screenshots at 390x844 and 1440x900 into /screenshots/<phase>; look at them critically and fix what looks off; then summarize what is done and what is next. Commit at the end of each phase.
3. Ask me before adding paid services. Keep secrets in .env (provide .env.example).

Stack
Next.js 15 (App Router, TypeScript strict), Tailwind CSS v4, React Three Fiber + @react-three/drei + @react-three/postprocessing, three (pin one exact version), troika-three-text for Arabic text inside WebGL (shaping + bidi;

```
bundle subsetted Aref Ruqaa / Amiri font files), GSAP + ScrollTrigger and
Lenis for DOM choreography, Zustand, Prisma + Postgres (Neon), Zod,
@upstash/ratelimit, @vercel/og, detect-gpu, Vitest, Playwright. Deploy on
Vercel.
Asset pipeline: glTF with meshopt or Draco, KTX2 textures via gltf-transform.
Budget per template: <= 2.5 MB compressed before the intro can start; lazy-
load the rest. Dynamic-import every 3D scene (ssr:false) so the page shell
paints first.

## Phase 1: Backend and platform
Prisma models:
- Wedding: id, slug, template, lang (ar|en), groomName, brideName, monogram,
dateTimeUtc, verse?, intro, venueName, venueArea, mapsUrl, dressCode, notes,
rsvpDeadline, schedule Json [{time,title,subtitle}], musicTrack,
paletteOverrides Json, originCity?, destinationCity? (for the travel
template), status (draft|live), coupleSecret.
- Guest: id, weddingId, displayName (e.g. "عائلة أبو حسين"), token (nanoid
10, unique), maxSeats, group?.
- Rsvp: guestId unique, attending, seats, message, createdAt, updatedAt.
- Event: weddingId, guestId?, type (opened | intro_completed | rsvp |
calendar | map), userAgent, createdAt.
Routes:
- /i/[slug]?g=<token>: renders the wedding's template; greets the guest by
name inside the scene and on the gate; RSVP prefilled, seats capped at
maxSeats. Without a token: generic greeting and a name field.
- POST /api/rsvp: Zod validation, rate limit by IP + token, idempotent
upsert, editable until rsvpDeadline.
- POST /api/events: batched beacons via navigator.sendBeacon.
- /i/[slug]/calendar.ics plus a Google Calendar link; /i/[slug]/opengraph-
image in the template palette with names and date.
- /d/[slug]?k=<coupleSecret>: couple dashboard. Totals (invited households,
confirmed seats, declined, no reply, opened but not answered), searchable
guest table, guest messages wall, CSV import and export, per-guest personal
link + QR code + a copy button with a ready Arabic message: "أهلاً {name}،
يسعدنا دعوتكم لحفل زفاف {groom} و{bride}. افتحوا الدعوة: {link}".
- /admin (password from env, iron-session): create/edit/duplicate weddings,
bulk-import guests, pick a template and palette with a live preview, publish
toggle.
- Seed one demo wedding per template (slug demo-<template>) with example
names.
Tests: Vitest for date formatting (numerals, month number + Gregorian name,
Baghdad time), RSVP validation and token access; Playwright e2e: open an
invite, RSVP, see the answer in the couple dashboard.

## Phase 2: Shared invitation engine (/lib/invite)
- InviteShell: branded loader with real progress, gate, intro sequence, hand-
```

off to the content page, a visible "تخطّي الحركة" skip button, a mute button, render pause when the tab is hidden.
- Fallbacks: if WebGL fails, the 3D chunk fails to load, or prefers-reduced-motion is set, show the template's own lightweight 2D version (CSS/SVG) of the same look, with the same content.
- Quality tiers from detect-gpu: high / medium / low (pixel-ratio cap 2 / 1.5 / 1, MSAA, shadow map size, bloom, particle counts, reflection resolution). drei PerformanceMonitor degrades smoothly at runtime.
- Interaction kit: pointer and touch tilt with springs; optional gyro tilt behind an explicit iOS permission button ("حرّكوا تلفونكم"); haptics via navigator.vibrate when available; tap, hold, swipe and SCRATCH gestures (a reusable scratch-to-reveal surface that works on DOM elements and on 3D meshes via a render-target mask).
- Audio kit: WebAudio graph with convolution reverb, foley one-shots (paper, wax crack, water, chimes, whoosh, cloth, plane), a music loop with crossfades. Music files live in /public/music (I will supply licensed tracks); until then use a tasteful synthesized placeholder. Audio starts only on the first user gesture.
- Content page over a living 3D backdrop that reacts to scroll and pointer: hero hand-off, flip-clock countdown (CSS 3D flip per digit), timeline whose gold line draws with scroll, venue card with 3D tilt + glare + map and calendar buttons, dress-code palette with notes for ladies and gentlemen, RSVP card (spring segmented control, seats stepper, message, success wax-stamp animation + a 3D particle burst + haptic), closing line, footer "دعوة من حاضرين، للطلب راسلونا على انستكرام @7adre.n".
- Accessibility: focus states, labels, AA contrast, keyboard path through the gate (Enter opens, Enter reveals scratch areas).

Phase 3: Six 3D templates (inspired by Webgency's catalogue, original execution)
Each template = one R3F scene with: a gate (idle, inviting interaction), a cinematic opening of 6-9 s (skippable), a seamless hand-off into the content page, and an ambient mode behind the sections. For each, write in PLAN.md: the Webgency theme it draws on, palette tokens, music mood, 3 key camera shots, the intro timeline in seconds, ambient behaviour, low-tier simplifications, the 2D fallback, and the size budget. Add /lab/[template] (dev only) with Leva controls for light and camera tuning.

1) الحديقة المقدّسة (theme: The Sacred Garden). Gate: the whole screen is a blush paper envelope with embossed florals and a wine-red wax seal held in 3D. Tap: the seal cracks, the flap lifts, the envelope drops away and reveals a stone arch wrapped in rose garlands over a still pond at golden hour. Two white swans glide in until their necks form a heart (planar reflection, ripples, floating petals). "بسم الله الرحمن الرحيم" and the names float in gold. Suits a nikkah.
2) ورد وعود (theme: Blossom & Oud). A blush envelope's flap lifts and rose-

satin curtains with gold tiebacks part on a crystal chandelier (transmission, glints) that sways softly. Below, a palm-lined road leads through pink mist to an Andalusian-Iraqi palace; scrolling dollies the camera down the avenue toward the gate. Oud-led music.
3) دولـتشي فيـتا (theme: Dolce Vita). A rose-covered stone balcony over a lake with mountains, villas and a sailing boat under a bright sky; clouds drift. The date hides under three powder-blue foil tiles the guest scratches (day / month number + name / year). A powder-blue envelope sits in the scene and its letter rises out as the guest scrolls. The programme floats on pastel 3D clouds.
4) الـذهب الـملكي (theme: Royal Gold). An ivory four-flap envelope with embossed florals and an ivory seal bursts open in golden light (volumetric beams + bloom) into a pointed Islamic arch with swinging brass lanterns, white blossoms and a pale-gold mosque; the couple, seen from behind, walks toward it. Timeline icons are gold line-art drawn as glowing 3D wire.
5) الـرومانسية الأبدية (theme: Eternal Romance). A burgundy velvet stage curtain (cloth shader) lifts while deep red petals fall; red roses and candles on an ivory table; a gold-framed card carries the names; the venue appears as a 3D line drawing that draws itself; burgundy and ivory sections with soft wave edges.
6) حب بلا حدود (theme: Destination Love). A stylised ivory-and-gold 3D globe; a plane flies an arc from originCity to the wedding city (default Baghdad) leaving a gold trail; the camera follows and lands on the venue. The invitation is a boarding-pass card (passenger = guest name, flight = the couple, date and time, gate = venue) whose stub tears off when the guest confirms attendance.

Phase 4: Marketing website (/)
Arabic RTL, 3D-first, original copy in Iraqi-friendly Arabic, following the same section flow as a premium invitation studio site.
- Hero: a full-bleed WebGL scene of the six invitations as floating 3D cards in an emerald-and-gold space, each card a live low-tier mini render of its template (render targets). Drag or scroll rotates the carousel; tapping a card brings it forward with a short music sting. CTAs: "شوفوا الـدعوة" (live demo) and "اطلبوا على انستكرام".
- Occasions ticker (أعراس، عقد قران، خطوبة، حنّة، ملكة، احفظوا الـموعد).
- A 3D phone that tilts with the pointer, its screen running the real demo (iframe) so visitors can try it in place.
- Gallery of the six with style filters: each card shows a looping preview video plus buttons to the live demo and to order.
- What's included, price (49 ألف دينار, one plan), how it works in 3 steps, FAQ with accurate answers only, final CTA, footer.
- Scroll choreography with GSAP ScrollTrigger + Lenis; reduced motion respected; 3D below the fold loads lazily.
- Preview videos: a Playwright script records each demo's intro at 390x844 and ffmpeg encodes MP4 + WebM into /public/previews.

```
- SEO: Arabic metadata, OG image, sitemap, robots. Mobile Lighthouse targets: Performance >= 85, Accessibility >= 95.

## Phase 5: Polish and QA
- Visual QA per template at three moments (gate, mid-opening, content) on phone and desktop; fix composition, color, timing.
- Performance: hold 50+ fps on the medium tier with CPU throttling; no layout shift; first meaningful paint under 2.5 s on 4G.
- Browsers: iOS Safari 17+, Chrome Android, desktop Chrome, Safari, Firefox.
- Docs: README (setup, env vars, how to create a wedding, how to add a template) and DEPLOY.md (Vercel + Neon).

Deliverables: running app, seeded demo weddings, screenshots per phase, preview videos, docs. Start now by studying the inspiration site, then write PLAN.md.
```

النماذج الستة باختصار

النماذج الستة مأخوذة من أجواء نماذج Webgency، بس برسومات ثلاثية الأبعاد ونصوص عربية مالتنا. النماذج القديمة ما داخلة بالمشروع.

النموذج	مقتبس من	المشهد	لحظة الفتح
الحديقة المقدّسة	The Sacred Garden	قوس ورد على بركة بالغروب	الختم ينكسر والبجعتين يسوّن قلب
ورد وعود	Blossom & Oud	ستائر وردية وثريا وطريق نخل لقصر	الغطاء يرتفع والستائر تنفتح
دولتشي فيتا	Dolce Vita	شرفة ورد على بحيرة وجبال	التاريخ يتمسح والرسالة تطلع من الظرف
الذهب الملكي	Royal Gold	قوس إسلامي وفوانيس وجامع	الظرف العاجي ينفتح بوهج ذهبي
الرومانسية الأبدية	Eternal Romance	مخمل خمري وورد أحمر وشموع	الستارة ترتفع والورد يتساقط
حب بلا حدود	Destination Love	كرة أرضية بالعاجي والذهبي	طيارة تطير لبغداد والدعوة تذكرة طيران

إذا وصلتك ملفاتهم الأصلية بموافقتهم، حطها بمجلد `reference/webgency/` و Claude Code يستخدمها مثل ما هي.

برومبتات المتابعة

استخدمهن بعد ما يخلص Claude Code المرحلة ويرسل الصور.

مراجعة نموذج بعين مخرج:

```
Review template <name> like a demanding film director and an Iraqi bride seeing it on her phone. Open /screenshots for gate, mid-opening and content at 390x844. List the 10 weakest things (composition, light, color, timing, text legibility, Arabic typography, sound, smoothness), fix them in order, then re-capture and show me before/after.
```

فحص الأداء على التلفونات:

```
Profile every template on the medium and low tiers with 4x CPU throttling. Report fps, draw calls, triangles, texture memory and download size per template in a table. Anything under 50 fps on medium or over the 2.5 MB budget: fix it (instancing, merged geometry, smaller textures, cheaper post) without visibly hurting the look.
```

تجربة عرس حقيقي من البداية للنهاية:

```
Run a full rehearsal: in /admin create a wedding on the Royal Gold template with 30 guests from a CSV, open three guest links, RSVP yes, no and yes with 4 seats, then open the couple dashboard and check totals, messages and the CSV export. Fix anything that breaks or reads unclearly in Arabic.
```

إضافة نموذج سابع بعدين:

```
Add a seventh 3D template called <name>: <scene idea>. Follow the same engine, tiers, fallbacks, budget and PLAN.md format; add it to the seed, the website carousel and the gallery with a preview video.
```
